WEEK-01

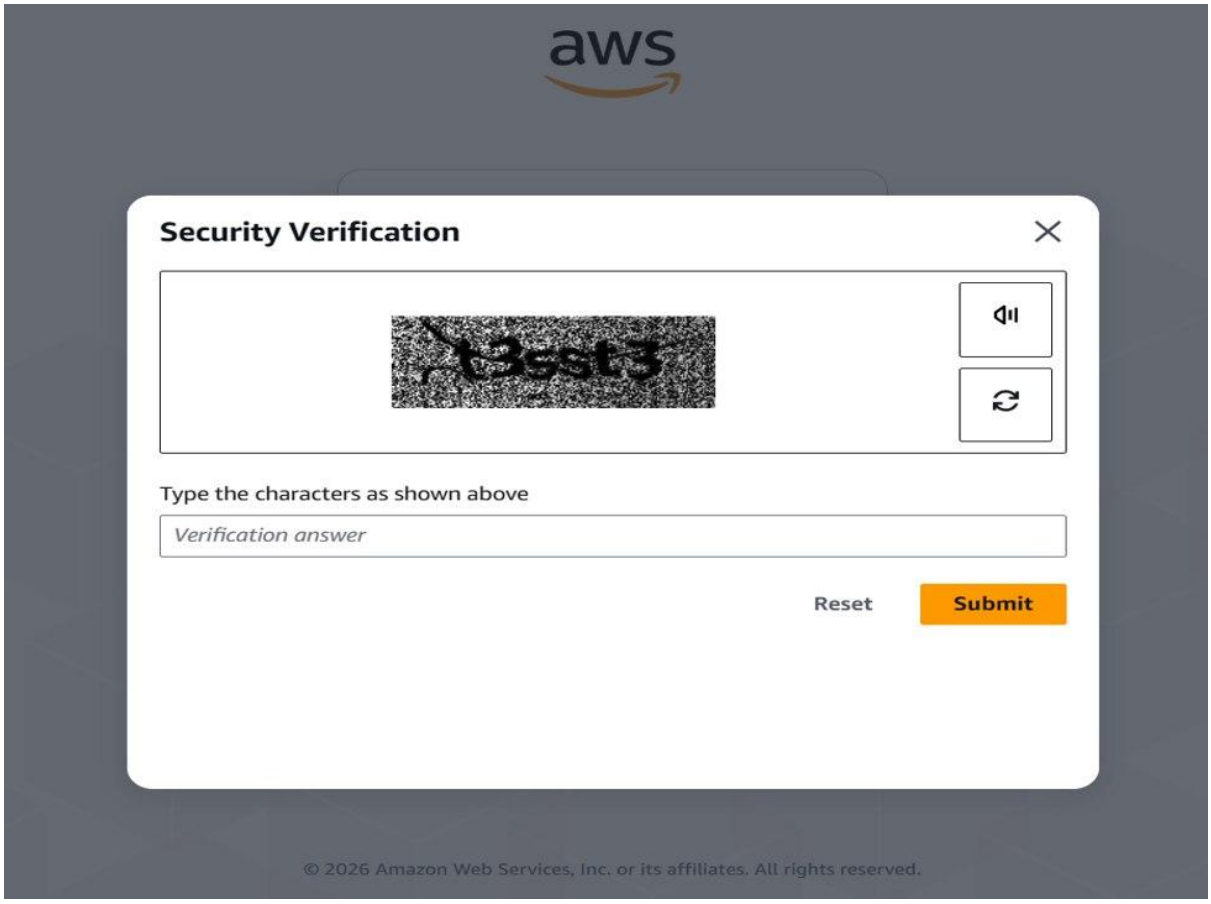

AWS sign-in:

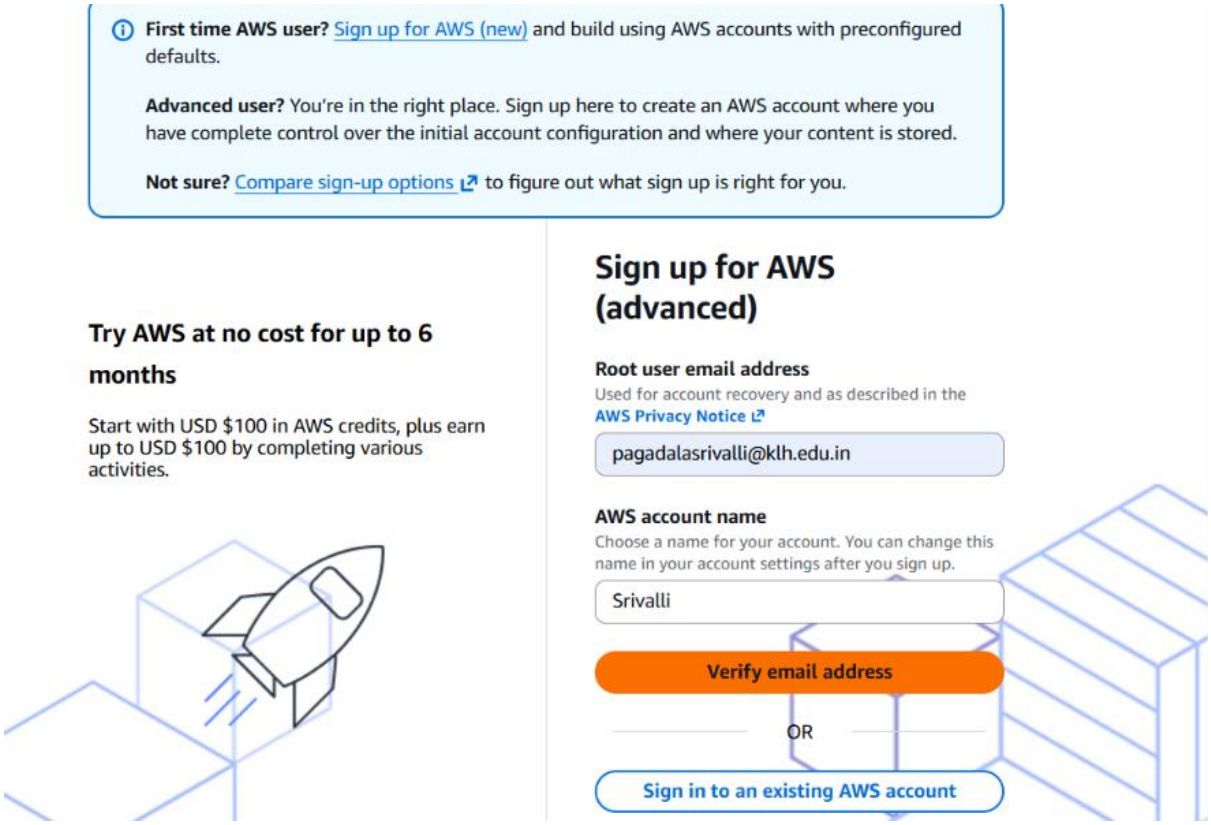

Signed in to the AWS Management Console using the registered account credentials to access AWS services

Successfully completed the step and verified the required settings in the AWS Console

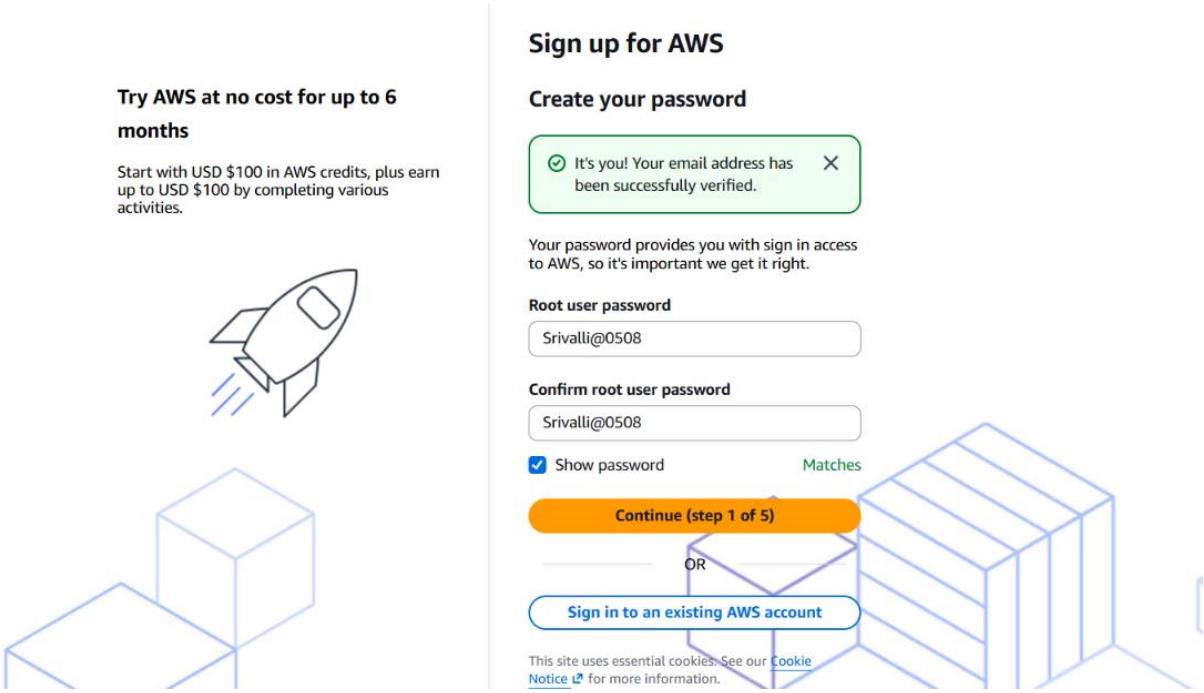

Completed the security verification process to confirm account authenticity and ensure secure access to the AWS Management Console

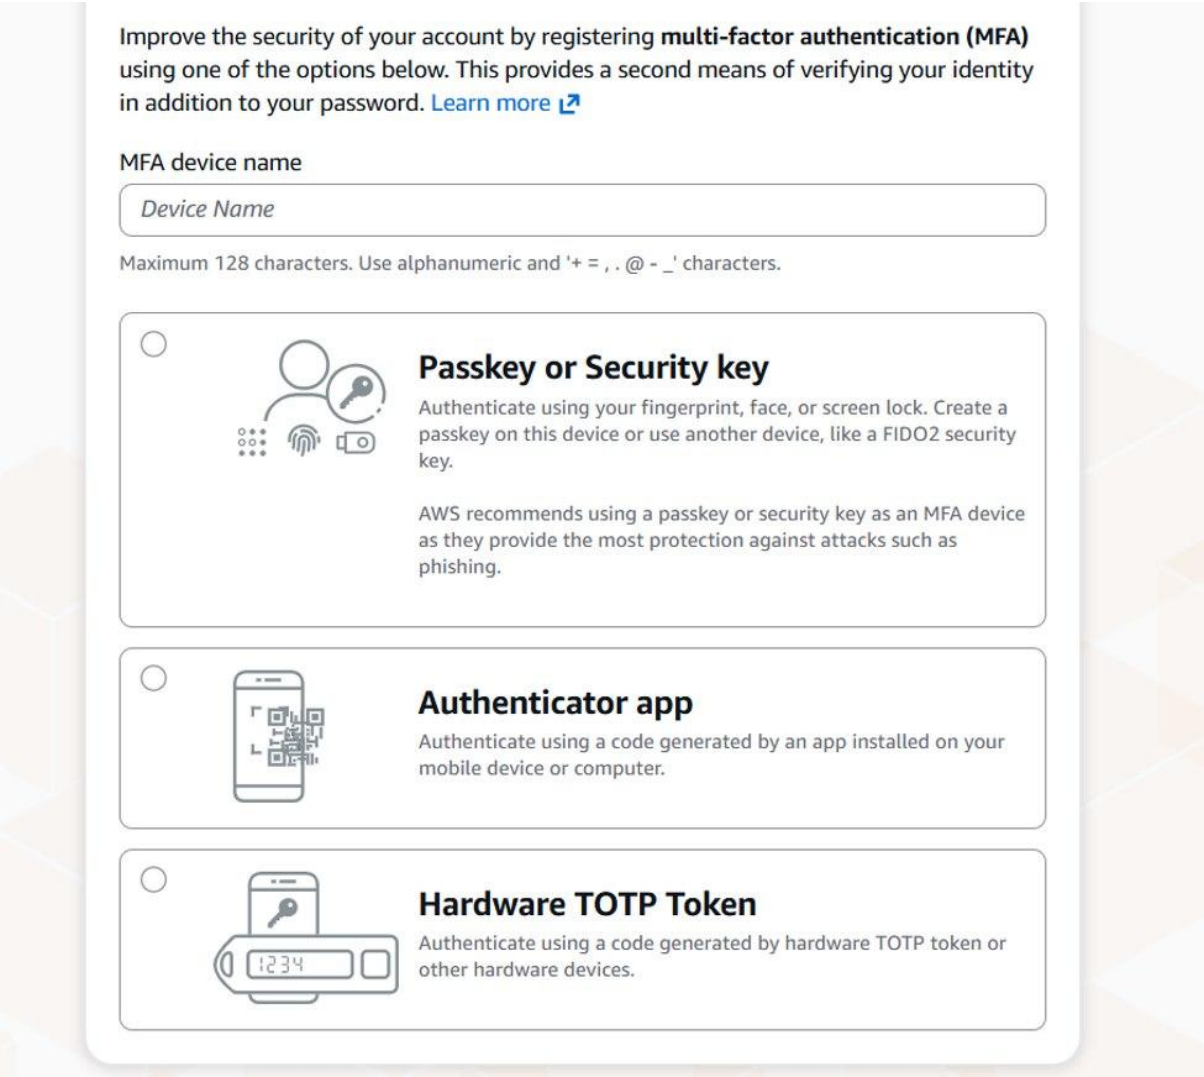

Attempted to sign in to the AWS account and verified the login process to access the AWS Management Console

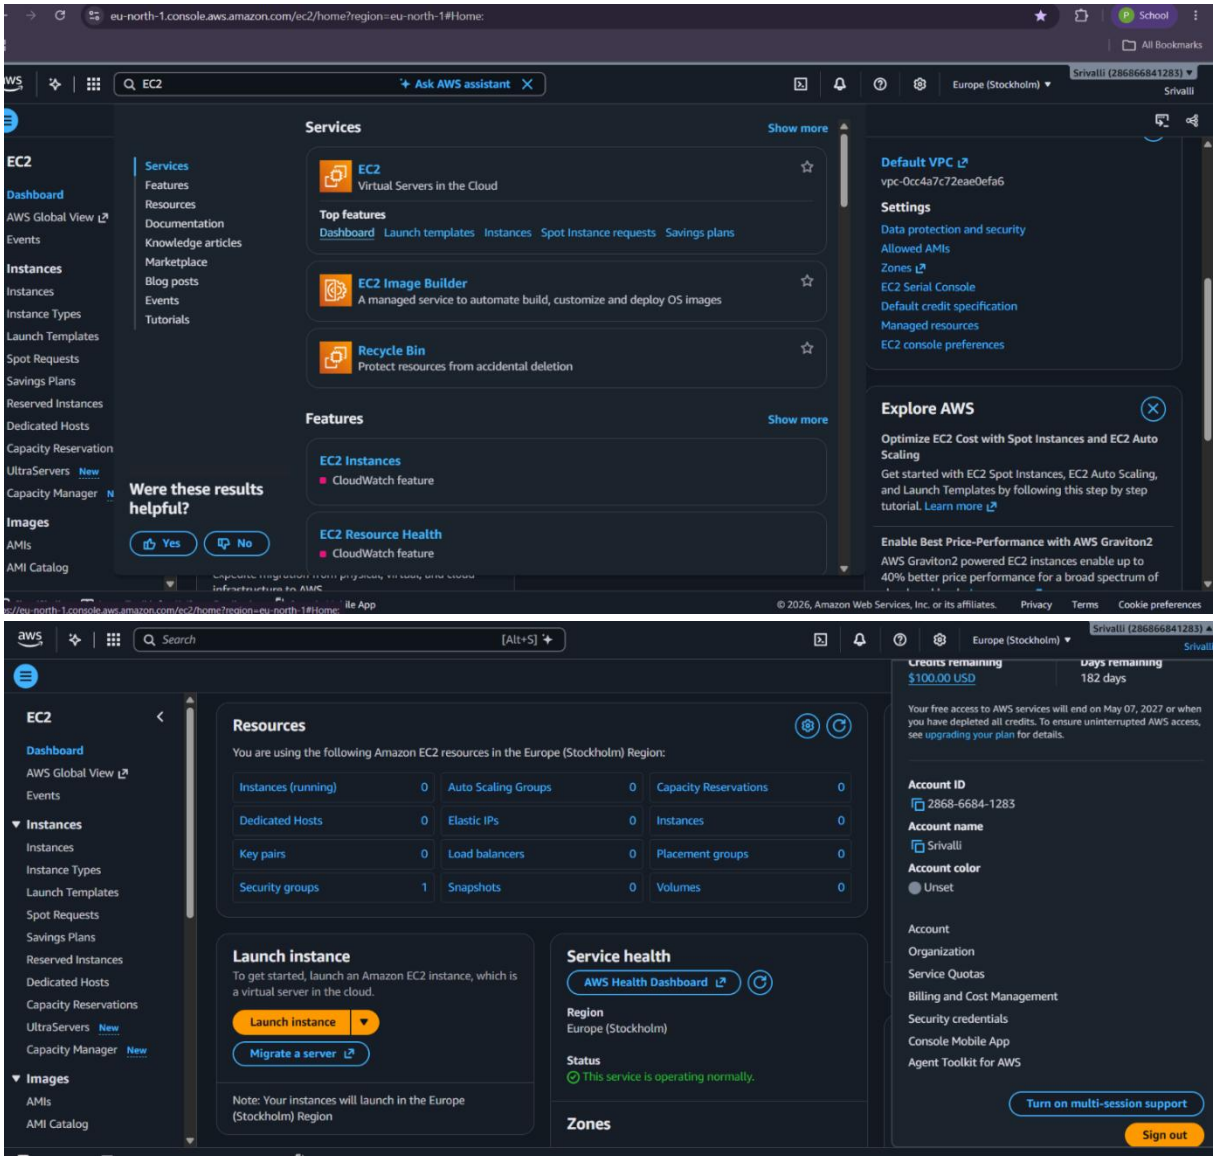

Successfully verified the registered email address and created a root user password by entering and confirming the password to proceed with AWS account registration.

Opened the MFA registration page to improve AWS account security by selecting an authentication method, such as a passkey, authenticator app, or hardware token, for additional identity verification

Successfully logged in to the AWS Management Console and accessed the dashboard. Explored the available AWS services, including EC2, to begin working with cloud computing resources
